PRODUCT BROCHURE

Senko

An automated gold momentum system. Seven independent strategies, each on its own hours, catch gold breaking out of its recent range and close the basket the moment it's in profit — usually within minutes.

Launching Wednesday 18 November 2026

$443k	$47.6k	28.5%	6
Medium, 4 years from $3,000	Medium, 2026 on JT Markets	Worst drawdown (Medium)	Risk levels

Backtest figures: XAUUSD, real tick data, Aug 2022 – Nov 2026 (StarTrader) and Jan – Nov 2026 (JT Markets), Medium level, $3,000 start, nothing withdrawn. Past performance is not a guarantee of future results.

How it trades

Seven small strategies, one engine. Each strategy knows exactly when it is allowed to trade and what it is waiting for; the engine makes sure only one of them is ever in the market.

01 · STRATEGIES

Seven, each on its own clock

Every strategy has its own trading hours, its own chart timeframe and its own side. Some work overnight, some the London open, some New York. You choose which ones run.

02 · ENTRY

Momentum breakouts

A strategy enters when a bar on its timeframe closes at a fresh high or low of its recent range, with trend and momentum confirming the move. No signal, no trade.

03 · ONE AT A TIME

Never stacks

Only one basket is open at any moment, across all seven strategies. While one is working, the others wait for it to finish.

04 · ADDING

Equal steps, equal size

If price moves against the first trade, Senko adds trades of the same size at fixed spacing. Later trades are never made bigger to chase the loss back.

05 · EXIT

Out on the first profit

The whole basket closes on the first one-minute close where it is in profit. Most baskets last minutes; many are a single trade.

06 · FILTERS

Knows when to sit out

No new baskets on FOMC or NFP days, from 15 December to 15 January, from Friday evening, or while the spread is too wide. All on by default.

What it doesn't do

- **No growing lot sizes.** Every trade in a basket is the same size. Lots only change with your balance and the risk level you pick.
- **No stacked baskets.** One basket at a time, so two strategies can never pile into the same move.
- **No hidden settings to tune.** Timeframes, hours, triggers, spacing and targets are fixed at the tested values. You choose the strategies and the risk level.

What you should know

- **There is no stop-loss.** When gold moves hard against an open basket, Senko holds and adds until price comes back. That usually takes minutes; occasionally hours or days, with a deep drawdown in the meantime.
- **Spread and execution matter.** Targets are small, so a raw-spread gold account and a VPS close to the broker make a real difference to results.

Pick your level

Same trades at every level — only the lot size changes. Lots scale with your balance: 0.01 lot for every $X in the account, worked out as each basket opens.

Level	0.01 lot per	On $3,000	StarTrader Aug 2022 – Nov 2026	Max DD	JT Markets Jan – Nov 2026	Max DD
Very Low	$2,000	0.02	$13,880	6.6%	$7,040	6.4%
Low	$1,200	0.03	$37,229	11.2%	$12,202	10.8%
Low-Medium	$800	0.04	$127,983	13.9%	$23,744	14.1%
Medium	**$600**	**0.05**	**$443,389**	**18.5%**	**$47,555**	**18.5%**
Medium-High	$500	0.06	$1,185,002	22.2%	$82,395	22.0%
High	$400	0.08	$2,323,393*	14.9%*	$185,132	27.7%

End balance from a $3,000 start, nothing withdrawn, real tick data. Max DD is the tester's largest peak-to-trough drop; measured against the balance at the time, Medium's worst drop was 28.5%. *High reaches the broker's 20-lot maximum order size during 2025–26 on StarTrader, so later trades are small relative to the balance and its total and drawdown there understate the risk; the JT figures are the better guide.

Our recommendation

Start on **Medium** or below. Medium is the level the system was built and forward-tested around. Plan for drawdowns of around 30% on Medium, and expect the higher levels to multiply drawdowns as fast as returns.

Two brokers, one system

Every setting was checked on StarTrader across four years, including the 2022–23 gold shocks, and on JT Markets through 2026. JT Markets is where most of our clients trade. Running live on demo since September 2026.

Minimum recommended balance: $3,000.

The fine print

What we'd want to know before buying, set out plainly.

Specs

Instrument	XAUUSD (gold) only
Platform	MetaTrader 5
Chart	XAUUSD M1, one chart
Strategies	Seven, each switchable
Minimum balance	$3,000
Risk levels	Six, Very Low to High
Typical hold	Minutes
Stop-loss	None; basket closes in profit
Open baskets	One at a time
News	Skips FOMC and NFP days
Holidays	Off 15 December – 15 January
Account	Hedging, raw-spread gold; VPS recommended
Licence	5 MT5 accounts, lifetime updates

Honest notes

- **No stop-loss means a bad night can be a big one.** Senko closes almost every basket in profit by holding through moves against it. An extreme one-way move can still cause a large loss.
- **Drawdowns are part of it.** The worst stretch on Medium was about 28.5% of the balance at the time. Size your account so you can sit through that.
- **The big totals come from compounding.** Lots grow with the balance, so the later years carry most of the dollar profit. Judge it by the percentages, not the four-year total.
- **Brokers differ.** Small targets make spread, commission and fills matter. Your results will be close to the backtest, not identical.
- **Higher levels are not free money.** Very High was removed because it failed on JT Markets in 2026. Above Medium, extra size adds drawdown as fast as return.

Risk warning. Trading leveraged products such as gold CFDs carries a high level of risk and may not be suitable for everyone. You can lose more than your deposit. All figures in this document are from historical backtests on real tick data and are not a guarantee of future results. Nothing here is financial advice. Only trade with money you can afford to lose.
